

Key Surgical Releases Bone Reamer Cleaning Brushes

Key Surgical expands its surgical instrument cleaning and care products to include brushes for manual cleaning of flexible bone reamers.

Key Surgical, Inc. is excited to offer cleaning brushes for flexible bone reamers. The Key Surgical bone reamer brush features a long, 31" rigid stainless steel shaft with medical-grade nylon bristles designed for effective manual cleaning of a flexible bone reamer – a notoriously challenging instrument to clean. Bristle diameters include 3mm (.118"), 5mm (.197"), and 7mm (.276"). Key Surgical's bone reamer cleaning brushes are reusable, can be used to clean other general use instruments, and are available in packages of 3.

Bone reamer brushes are an exciting new addition to an already-extensive line of instrument cleaning brushes from Key Surgical. For more information about [instrument cleaning brushes](#) please visit www.keysurgical.com or call 800-541-7995. [Ordering](#) is easy with same-day shipping on orders placed by 4:30pm CST.

About Key Surgical
