Case Medical Receives ISO 27001 Certification

Globally Recognized Certification Attests to the Security of Case Medical's Software Platform

South Hackensack, NJ – April 5, 2018 – Case Medical, an ISO 13485 certified and FDA registered medical device manufacturer of products and services for instrument processing, is proud to announce that it has been awarded the prestigious ISO 27001 Certification. A company with ISO 27001 certification means that the company's software was developed under the requirements of ISO 27001 Information Security Management System, conforms to the highest quality standards, and that its information security practices are certified to meet international standards.

Case Medical understands the importance of infection prevention and traceability and has developed two software platforms that integrate with its products to meet current guidelines. The company has implemented UDI labeling and installed laser marking equipment for direct product identification, an FDA requirement for all Class II devices by September of this year.

As a medical device manufacturer known for instrument processing products, such as sterilization containers and cleaning solutions, Case Medical has recently launched two software platforms, CaseTrak360® and LoanerLocate® designed to track both surgical instrument sets and loaner trays to ensure efficiency, traceability, and asset management in real time. The ISO 27001 Certification shows that Case Medical has implemented security procedures to protect customers' and patient's information in accordance to the most rigorous standards.

"This certification serves as a demonstration of our commitment to continuous quality improvement and quality assurance" states Marcia Frieze, CEO. "We are delighted to have received this, amongst the list of our other credentials and awards, including U.S. EPA Safer Choice Partner of the Year, ISO 13485 certification, and numerous patents and FDA 510ks for our product lines."

The certification itself means that the company adheres to defined legal, regulatory, contractual, quality and security requirements. Some of those requirements include: security of data in the software, shielded access to the authorized user, defined system response time, and security level response.

About Case Medical

Case Medical is a FDA registered, ISO certified manufacturer of quality, sustainable, and cost-effective products for instrument processing.
