PRESS RELEASE

Censis Technologies Launches New Website

Franklin, TENN: Censis Technologies announced today that they have launched a new website, www.censis.com. The new site is focused on providing a cleaner and more interactive experience for users. The updated site introduces a new way to learn about the solutions offered in the Censis portfolio, using multiple forms of media. With innovative technology and website design tools, the user will now be able to navigate and explore the site using whatever browser or device they choose.

In addition to updating the central part of the new website, the Censis customer portal has been redesigned, providing the user a better way to find resources and training materials for their staff. This effort is phase one of a three-phase plan to engage with current and prospective clients utilizing different digital media. Phase two will unveil at the annual Censis Technologies Users Conference (CtUC) in August of 2017.

“We are excited to offer our customers and the healthcare industry an enhanced website that provides up-to-date information about surgical asset management,” said Randy Smith, Censis Technologies CEO. “Our team is committed to providing the healthcare industry relevant digital resources through videos, eBooks, blog posts, and live on-line events, all with the goal of supporting the enhancement of patient safety.”

About Censis Technologies

Censis Technologies, based in Franklin, Tenn., is the industry leader in surgical instrument and asset management software. Censis offers multiple solutions, including Censitrac, which is a highly advanced, web-based software system focused on maximizing OR throughput and regulatory compliance. Censis Technologies’ software is deployed in hundreds of hospitals in the United States, Canada, and Australia.
